
vinamold®

Vinamold Hot Melt Compounds are meltable vinyl compositions used for the preparation of flexible moulds as alternatives to silicon rubbers, polyurethanes and rubber latex in the casting of concrete, gypsum, polyester resins and glass fibre laminates. Vinamold is a very well established name, having been the leading Hot Melt Compound for over 35 years both in the UK and throughout the world.

Where to use vinamold

Construction:

Prefabricated concrete panels, decorative panels, ornaments, roof tiles and products made from G.R.C. and Gypsum.

Interior Decoration:

Ceiling and wall embellishments, coving, cornices, decorative effects, furniture, mirror/picture surrounds, false beams - wood/stone, brick simulation, doors, plaques, suspended ceilings, acoustic and thermal insulating tiles.

Souvenirs, Arts and Crafts:

Replicas of antique items, figurines, dolls heads, masks, historical replicas. Sculpture replicas, fossil casts.

Health and Safety

Please refer to our safety data sheet for information. Please note that, when melted, Vinamold can cause severe burns if in contact with the skin.
